Embedded Software Engineer

We are hiring again!

Posted on
June 24th, 2020

WolkAbout company is looking for a dedicated candidate to join our Embedded Software Engineering Team. With our Front-End, Back-End and DevOps teams, he/she will participate in features development and have the opportunity to deliver highly reliable code, research and develop new technologies, grow professionally and achieve great things together!

Who we are:

Founded in 2013 by a team of veterans in the industrial automation and software development industry, WolkAbout is one of the pioneering Industrial Internet of Things companies. We built a complete IoT application enablement platform and user-friendly tools to allow system integrators, product and service providers to develop and rapidly bring industrial-grade IoT applications to market.

With 50+ employees and headquarters in Prague, Czechia, a regional office in Arnhem, the Netherlands and a development centre in Novi Sad, Serbia, WolkAbout is simplifying digital transformation journeys worldwide.

Send us your CV at careers@wolkabout.com

In WolkAbout, our Embedded Engineers typically:

- + Develop the applications for embedded devices (e.g. gateways, industrial PCs) for the purpose of solving various industry domain problems
- + Update existing SDKs and software tools with the latest features
- + Get involved in the integration of various hardware platforms to the cloud
- + Participate in the integration with the third-party cloud services
- + Develop industrial communication protocols from the specification

You are a great fit for this role if you have the following skills and experience:

- + Preferably 3+ years of professional experience in software development
- + Knowledge of C++ compilers, libraries, toolsets, frameworks and Unit testing
- + Excellent knowledge of C++ programming language, with a good understanding of Standard Library and C++ 11/14/17 standard
- + Good knowledge of the C programming language
- + Software design skills, with a deep understanding of good software engineering principles
- + Good knowledge in Linux-based platform - especially infrastructure related to the operating system configuration (services, daemons) and shell scripting
- + Experience in using Git
- + Basic understanding of how the embedded hardware works -
- there is no ghost inside :)
